The invention provides isolated nucleic acid sequences encoding a proto-
concogene tyrosine kinase (poTK). The poTK polynuclectides and protein may
be used in the prevention, diagnosis and treatment of diseases associated
with inappropriate poTK expression, such as lung and kidney tumours,
leukenia and stomach adenocarcinoma. poTK may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient s genome that affect the activity of poTK by expressing
inactive proteins or to supplement the patients own production of poTK.
The encoded poTK may be used as an antigen in the production of
antibodies against poTK and in assays to identify modulators of poTK
expression and activity. The anti-poTK antibodies and antagonists may be
used to down regulate expression and activity and as diagnostic agents
for detecting the presence of poTK in samples. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

CC The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CC Peptides of the invention are useful in assays to determine the CC biological activity of the protein, in drug screening assays, tissue CC typing and pharmacogenomic analysis. They are also useful in treating or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma). CC arteriosclerosis, and psoriasis. Nucleic acid molecules of the invention CC assays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification CC the development of human therapeutic targets, aid in the identification CC therapeutic proteins and serve as targets for the development of human therapeutic targets for the development of human therapeutic targets for the development of human cc assays. The peptide and sequence gene encoding the protein of the invention may also be useful in gene therapy. The gene encoding the protein of the invention CC has been localised to human chromosome 15. The current sequence cof the invention. NOTE: This sequence is not further mentioned in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The peptide is useful for preparing a composition for treating a disease or condition mediated by a human kinase protein e.g. cancer. The present sequence represents the amino acid sequence of the human V-FES/FPS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human kinase peptides, useful for preparing a composition treating a disease or condition mediated by human kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gan W,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27-MAR-2001; 2001US-00817180.

```

The invention relates to novel human secreted polypeptides. The CC polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated CC with altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells corpressing the proteins are useful for identifying a therapeutic agent CC for use in treatment of a pathology related to aberrant expression or CC physiological interactions of the polypeptide. Vectors comprising the cucleic acids encoding the polypeptides and cells genetically engineered CC to express them are also useful for producing the proteins. The proteins CC are useful in genetic vaccination, testing and therapy, and can be used CC as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon CC and/or nerve tissue growth or regeneration; immune suppression and/or CC stimulation; as anti-inflammatory agents; and in treatment of leukaemias. CC AAU29510-AAU3304 represent the amino acid sequences of novel human createred contents of the invention contents of the secreted proteins of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       therapy. The human KPP proteins and polynucleotides can be used in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for inducing neutralisation of cells or tissues by using a protein binding to CRAM (collapsing response mediator protein-associated molecule) protein or its encoded gene. The proteins and their encoded genes are useful in gene therapy and regenerative medicine, e.g. by inducing neutralisation of mitochondria. They are also applicable in diagnosis, drug development for neural diseases and studying the mechanism of pathosis. The current sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genes and proteins participating in neutralization of cells or tissues, useful in gene therapy and regeneration medicine, applicable in diagnosis, drug development for neural diseases and study of mechanism

CC polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated CC with altered levels of polypeptide. The polypeptides are useful for CC identifying agents (agonists and antagonists) that bind to them. Cells CC expressing the proteins are useful for identifying a therapeutic agent CC for use in treatment of a pathology related to aberrant expression or CC physiological interactions of the polypeptide. Vectors comprising the CC useful acids encoding the polypeptides and cells genetically engineered CC to express them are also useful for producing the proteins. The proteins CC are useful in genetic vaccination, testing and therapy, and can be used CC as nutritional supplements. They may be used to increase stem cell CC proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon CC and/or nerve tissue growth or regeneration; immune suppression and/or CC stimulation, as anti-inflammatory agents; and in treatment of leukaemias. CC AAU29510-AAU3304 represent the amino acid sequences of novel human CC secreted proteins of the invention ő novel human secreted polypeptides: The

AC AD The invention relates to a novel isolated polypeptide which is a human CC kinase and phosphatase (KPP). The polypeptide of the invention CC demonstrates cardiovascular, antiatreriosclerotic, hypotensive, CC vasotropic, antialflammatory, antianginal, anti-HIV, antiallergic, CC antiasthmatic, immunosuppressive, antithyroid, dermatological, accompathic, antiarthritic, unopathic, ophthalmological, neuroprotective, CC antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, CC antiparkinsonian, nootropic, anticonvulsant, hepatotropic, antipsoriatic, CC antiparkinsonian, nootropic, antilpaemic, antiparasitic, antiphacterial, virucide, protozoacide and fungicide activities. The CC antiparker of the polynucleotides, polypeptides, agonists and considers and phosphatase (KPP) polynucleotides, polypeptides, agonists and CC disorders such as cardiovascular diseases, immune system disorders, cell proliferative disorders and viral, bacterial, fungal, parasitic, cell protozoan or helminthic infections. Furthermore, the molecules of the

The invention relates to a purified protein (I) that promotes type II collagen expression. Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human protein that promotes type II collagen expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a purified protein (I) that promotes type II collagen expression. Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human protein that promotes type II collagen expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 823 AA;

Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the interaction of a protein with other molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Prediction; secondary structure; alignment; e

Sequences AAY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assignment by interesting periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the interaction of a protein with other molecules. ```
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, AND
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CLOOL183DIVI
CURRENT APPLICATION NUMBER: US/10/660,763
CURRENT APPLICATION NUMBER: US/10/660,763
CURRENT FILING DATE: 2003-09-12
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FASTESEQ for Windows Version 4.0
SEQ ID NO 1
LENGTH: 2674
TYPE: DNA
ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 100.0%; Score 2256; Best Local Similarity 100.0%; Pred.       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-003-295-1

Sequence 1, Application US/10003295

Patent No. 6886187

Patent No. 6886187

FERENAL INFORMATION:
APPLICANT: GAN, Weiniu et al.
APPLICANT: GAN, Weiniu et al.
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILLE OF INVENTION INTEREOF
FILLE REFERENCE: CL001183DIV
CURRENT APPLICATION NUMBER: US/10/003,295
CURRENT APPLICATION NUMBER: US/10/003,295
CURRENT FILING DATE: 2001-12-06
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 1
LENGTH: 2674
TYPE: DNA
CRGANISM: Homo Bapiens
US-10-003-295-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        į
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                         음 성

Sequence 3, Application US/09817180

Patent No. 6340584

GENERAL INFORMATION:
APPLICANT: GAN, Weiniu et al.

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS,
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL001183

CURRENT APPLICATION NUMBER: US/09/817,180

CURRENT FILING DATE: 201-03-27

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FASTSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Sequence 3, Application US/10003295

Patent No. 6686187

Patent No. 6686187

GENERAL INFORMATION:

APPLICANT: GAN, Weiniu et al.

ITITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

FILE REFERENCE: CL001183DIV

CURRENT FILING DATE: 2001-12-06

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 3

LENGTH: 15297

TYPE: DNA

ORGANISM: Homo sapiens
                                                                                    Ş
                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            શ
